No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC This invention relates to non-naturally occurring peptide ligands which CC bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides CC represented in AAB7650 - AAB76432 - AAB76509 are examples CC of the ErbB2 binding ligands of the invention. Sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC disorders characterized by over expression of HER2/ErbB2 such as cancers, CC diseases of the nervous system, musculature and epithella, e.g. nervous cc system damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC Inparticular the synthetic peptide ligands may be used to treat CC Inparticular the synthetic peptide ligands may be used to treat CC Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, CC Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease CC and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The SIGP protein can be used, in conjuncture CC with a pharmaceutical carrier to treat or prevent a cancer. An antagonist CC of the SIGP protein can be used to treat or prevent a cancer or an immune response. The cancers that can be treated or prevented include CC sarcomas, adenocarcinomas, leukemia's, lymphomas, melanomas, CC teratocarcinomas, myelomas and cancers of the adrenal gland, bladder, CC bone, bone marrow, brain, breast, cervix, gall bladder, gangila, CC dastrointestinal tract, heart, kidney, liver, lung, muscle, ovary, CC gastrointestinal tract, heart, kidney, liver, lung, muscle, ovary, CC testis, thymus, thyroid, and uterus. The immune responses that can be CC treated or prevented include, AnDS, Addison's disease, adult respiratory CC distress syndrome, allergies, anemia, asthma, atherosclerosis, conchitis, cholecystitus, Crohn's disease, ulcerative colitis, atopic CC dermatitis, dermatomyositis, diabetes mellitus, emphysema, attophic constricts of the company of the content of the company of the content of the conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gastritis, glomerulonephritis, Grave's disease, gout, hypereosinophili irritable bowel syndrome, lupus erythematosus, multiple sclerosis, myasthenia gravis, myocardial or pericardial inflammation, osteoarthritis, osteoporosis, pancreatitis, polymyositis, rheumatoid arthritis, scleroderma, Sjogren's syndrome, and autoimmune thyroditis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tissue cement protein; TCP; blood-feeding; ectoparasite; pharmaceutical; vaccine; tissue bonding; surgical wound; skin grafting; immunogen; infection; arthropod parasite.

                            This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples of the ErbB2 binding ligands of the invention. Sequences AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  blood-feeding ectoparasites. The TCP, in a pharmaceutical composition, is useful for therapy, as a vaccine or vaccine component. The TCP itself is used to immunize an animal for production of such a vaccine. The TCPs are useful for bonding animal tissues. This may be temporary or permanent bonding and used in, e.g. repair of incised surgical wounds, lacerations, skin grafting, etc. The TCP can also be used as a protective immunogen in the control of diseases caused by infections transmitted by arthropod parasites. The tick TCPs provide a non-immunogenic tissue cement capable of bonding mammalian tissue with great strength. The hardening or elastic

                                                                                                                                 This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76432 - AAB76599 are examples of the ErbB2 binding ligands of the invention. Sequences of the ErbB2 binding ligands of the invention. Sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, isochaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Meniere's disease; diabetic neuropathy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.

                                                                                                                                                                                                          This invention relates to non-naturally occurring peptide ignals which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76422 - AAB76509 are examples of the ErbB2 binding ligands of the invention. Sequences AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, uniting from trauma, surgery multiple sclerosis, and may be used to treat alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, uniting from trauma, and may be used to treat alzheimer's disease, parkinson's disease, epilepsy, multiple sclerosis, uniting from trauma, and the sequence of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Non-naturally occurring peptide ligands which compete for binding human erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Meniere's disease; diabetic neuropathy

                                                                                                                                                                                                                                                                                                                                                This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76432 - AAB76599 are examples of the ErbB2 binding ligands of the invention. Sequences used in AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents.
                                                                                                                                                                                                                                                                                         In particular the synthetic peptide ligands may be used Alzheimer's disease, Parkinson's disease, epilepsy, mult Huntington's chorea, Down's syndrome, nerve deafness, Me and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Non-naturally occurring peptide ligands which compete for binding erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabblic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Menlere's disease; diabetic neuropathy

                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples of the ErbB2 binding ligands of the invention. Sequences AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, interaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C11-JAN-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples of the ErbB2 binding ligands of the invention. Sequences aAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, particular acceptance of disease, parkinson's disease, particular acceptance of disease, parkinson's disease, par
                                                                                                                                                                                                                                                   metabolic disorder; nutritional deficiency; Alzheimer's disease;
Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Non-naturally occurring peptide ligands which compete for binding erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC This invention relates to non-naturally occurring peptide ligands which CC bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides CC represented in AAB76350 - AAB76420 and AAB76302 - AAB76309 are examples CC of the ErbB2 binding ligands of the invention. Sequences CC AAB76421 - AAB76431 represent antibody Fc amino acid, sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC discases of the nervous system, musculature and epithelia, e.g. nervous competed for CC competed for CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC infection; action of particular the synthetic peptide ligands may be used to treat CC infection; according to the synthetic peptide ligands may be used to treat CC Infection; chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

cc bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides CC represented in AAB76350 - AAB76420 and AAB76432 - AAB764509 are examples CC of the ErbB2 binding ligands of the invention. Sequences CC AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC disorders characterized by over expression of HER2/ErbB2 such as cancers, CC diseases of the nervous system, musculature and epithelia, e.g. nervous CC system damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC In particular the synthetic peptide ligands may be used to treat CC Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, CC and neuropathy associated with diabetes.

disorders characterized by over expression of HER2/ErbB2 such as cancers diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia,
                                                      This invention relates to non-naturally occurring peptide ligands which bind to the human erbb2 gene product Erbb2 (also known as HER2). Peptides represented in ABB76350 - ABB76420 and ABB76432 - ABB76590 are examples of the Erbb2 binding ligands of the invention. Sequences of the Erbb2 binding ligands of the invention sequences used in ABB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding Erbb2 with naturally occurring ligands, and may be used to treat
                                                                                                                                                                                                                                                Non-naturally occurring peptide ligands which compete for binding erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Meniere's disease; diabetic neuropathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAB76391
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT
                           This invention relates to non-naturally occurring peptide ligands which CC bind to the human exbB2 gene product ErbB2 (also known as HER2). Peptides CC represented in AAB76350 - AAB76402 and AAB76432 - AAB76509 are examples CC of the ErbB2 binding ligands of the invention. Sequences CC AB76421 - AAB76431 represent antibody Fc amino acid sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC disorders characterized by over expression of HER2/ErbB2 such as cancers, CC diseases of the nervous system, musculature and epithelia, e.g. nervous cystem damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC In particular the synthetic peptide ligands may be used to treat CC In particular the synthetic peptide ligands may be used to treat CC In commer's disease, Parkinson's disease, epilepsy, multiple sclerosis, CC Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease CC and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                           Non-naturally occurring peptide ligands which compete for binding human erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     02-JUL-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabbolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Meniere's disease; diabetic neuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ErbB2 binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAB76391 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              In particular the synthetic peptide ligands may be used to treat Alzhelmer's disease, Parkinson's disease, epilepsy, multiple scl Huntington's chorea, Down's syndrome, nerve deafness, Meniere's and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                       Disclosure; Figure 16;

                                                                                                                                                                                                                                                                                                           This invention relates to non-naturally occurring peptide ligands which CC bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides CC represented in AAB76350 - AAB76402 and AAB76432 - AAB76509 are examples CC of the ErbB2 binding ligands of the invention. Sequences CC AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC diseases of the nervous system, musculature and epithelia, e.g. nervous CC system damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC In particular the synthetic peptide ligands may be used to treat CC Alzheimer's disease, Parkinson's disease, pepllepsy, multiple sclerosis, CC Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease can dearn and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score
